1960s and later : The decades following the decline of the studio system in the 1960s saw changes in the production and style of film. Various New Wave movements including the French New Wave, Indian New Wave, Japanese New Wave, and New Hollywood and the rise of film-school-educated independent filmmakers contributed to the changes the medium experienced in the latter half of the 20th century. Digital technology has been the driving force for change throughout the 1990s and into the 2000s. Digital 3D projection largely replaced earlier problem-prone 3D film systems and has become popular in the early 2010s.citation needed

Film criticism Main article: Film criticism If a movie can illuminate the lives of other people who share this planet with us and show us not only how different they are but, how even so, they share the same dreams and hurts, then it deserves to be called great. The first public screenings of films at which admission was charged were made in 1895 by the American Woodville Latham and his sons, using films produced by their Eidoloscope company,2 and by the – arguably better known – French brothers Auguste and Louis Lumière with ten of their own productions.citation needed Private screenings had preceded these by several months, with Lathams slightly predating the Lumière brothers.citation needed

Animation : Animation is a technique in which each frame of a film is produced individually, whether generated as a computer graphic, or by photographing a drawn image, or by repeatedly making small changes to a model unit see claymation and stop motion, and then photographing the result with a special animation camera. When the frames are strung together and the resulting film is viewed at a speed of 16 or more frames per second, there is an illusion of continuous movement due to the phi phenomenon. Generating such a film is very labor-intensive and tedious, though the development of computer animation has greatly sped up the process. Because animation is very time-consuming and often very expensive to produce, the majority of animation for TV and films comes from professional animation studios. However, the field of independent animation has existed at least since the 1950s,

with animation being produced by independent studios and sometimes by a single person. Several independent animation producers have gone on to enter the professional animation industry. Limited animation is a way of increasing production and decreasing costs of animation by using short cuts in the animation process. This method was pioneered by UPA and popularized by Hanna-Barbera in the United States, and by Osamu Tezuka in Japan, and adapted by other studios as cartoons moved from movie theaters to television.16 Although most animation studios are now using digital technologies in their productions, there is a specific style of animation that depends on film. Camera-less animation, made famous by film-makers like Norman McLaren, Len Lye, and Stan Brakhage, is painted and drawn directly onto pieces of film, and then run through a projecto
